

Villanova network performance monitoring

The villanova network performance monitor project covers the monitoring the network availability and performance:

- Analysis of the performance of the device using the charts.
- Usage of network alerts to know the status of devices and the interfaces.
- Network availability and performance monitoring.
- Hardware health monitoring.

The project is used to analyze the network of villanova and reports are used to improve the performance of the devices of the network and to identify the root cause for the network performance suppressors.
