

## Final Sample Question 4

Given the following values, hash function, and rehash function complete the following questions. You can assume that when the 2 wide bucket is full, it rehashes the column vertically.

```

int[] list; // Hashtable

int hash(int idNum) {
    return (idNum % 10);
}

int rehash(int location) {
    while(list[location] != null) {
        location = (location+1) % 10;
    }
    return location;
}
// Insert numbers in the following order, 4500, 3, 1200, 1201, 3609, 3606, 3709, 505, 1

```

[0]	4500
[1]	1200
[2]	1201
[3]	3
[4]	3709
[5]	505
[6]	3606
[7]	1
[8]	
[9]	3609

(a) Linear Probing

[0]	4500	1200
[1]	1201	1
[2]		
[3]	3	
[4]		
[5]	505	
[6]	3606	
[7]		
[8]		
[9]	3609	3709

(b) 2 wide Buckets

[0]	
[1]	
[2]	
[3]	
[4]	
[5]	
[6]	
[7]	
[8]	
[9]	

(c) Chaining
