Try this: Use the “for each” loop to scan through an array of `int` containing ratings (range: 0 - 4) and count up how many 4’s.

```
int[] ratings = {4, 3, 3, 1, 4, 3, 1, 0, 3, 4};
```

Try this: Repeat the previous exercise, keeping track of each of the counters in a separate array.

```
int[] ratings = {4, 3, 3, 1, 4, 3, 1, 0, 3, 4};
```
